

## COUNCIL POLICY

**Title:** Accounting Principles

Shire of  
**Kellerberrin**

**Responsible Officer:** Deputy Chief Executive Officer

**Version:** Current

### 1. PURPOSE

The purpose of this policy is to ensure consistency and accuracy of reporting in accordance with required standards.

### 2. SCOPE

This policy is applied to the Shire of Kellerberrin and its elected members and employees.

### 3. DEFINITIONS

### 4. STRATEGIC CONTEXT

This policy links to key goal areas:

1. Relationships that bring us tangible benefits (to the Shire and our community)
2. Our lifestyle and strong sense of community
3. We are prepared for opportunities and we are innovative to ensure our relevancy and destiny

### 5. POLICY STATEMENT

#### (A) Basis of Preparation

The budget has been prepared in accordance with applicable Australian Accounting Standards (as they apply to local government and not-for-profit entities). Australian Accounting Interpretations, other authorities pronouncements of the Australian Accounting Standards board, the local Government Act 1995 and accompanying regulations. Material accounting policies which have been adopted in the preparation of this budget are presented below and have been consistently applied unless stated otherwise.

Except for cash flow and rate setting information, the budget has also been prepared on the accrual basis and is based on historical costs, modified, where applicable, by the measurement of fair value of selected non-current assets, financial assets and liabilities.

#### **The Local Government Reporting Entity**

All Funds through which the Council controls resources to carry on its functions have been included in the financial statements forming part of this budget.

In the process of reporting on the local government as a single unit, all transactions and balances between those Funds (for example, loans and transfers between Funds) have been eliminated.

All monies held in the Trust Fund are excluded from the financial statement. A separate statement of those monies appears at Note 16 to this budget document.

**(b) 2019/20 Actual Balances**

Balances shown in this budget as 2019/20 Actual are as forecast at the time of the budget Preparation and are subject to final adjustments.

**(c) Rounding Off Figures**

All figures in this budget, other than a rate in the dollar, are rounded to the nearest dollar.

**(d) Rates, Grants, Donations and Other Contributions**

Rates, grants, donations and other contributions are recognised as revenues when the local Government obtains control over the assets comprising the contributions.

Control over assets acquired from rates is obtained at the commencement of the rating period or, where earlier, upon receipt of the rates.

**(e) Goods and Services Tax (GST)**

Revenues, expenses and assets are recognised net of the amount of GST, except where the amount of GST incurred is not recoverable from the Australian Taxation Office (ATO).

Receivables and payables are stated inclusive of GST receivable or payable. The net amount of GST recoverable from, or payable to, the ATO is included with receivables or payables in the statement of financial position.

Cash flows are presented on a Gross basis. The GST components of a cash flows arising from Investing or financing activities which are recoverable from, or payable to, the ATO are presented as operating cash flows.

**(f) Superannuation**

The Council contributes to a number of Superannuation Funds on behalf of employees.

All funds to which the Council contributes are defined contribution plans.

**(g) Cash and Cash Equivalents**

Cash and cash equivalents include cash on hand, cash at bank, deposits available on demand with banks, other short term highly liquid investments that are readily convertible to know amounts of cash and which are subject to an insignificant risk of changes in value and bank overdrafts.

Bank overdrafts are shown as short term borrowings in current liabilities in the statement of financial positions.

**(h) Trade and Other Receivables**

Trade and other receivables include amounts due from ratepayers for unpaid rates and service charges and other amounts due from third parties for goods sold and services performed in the ordinary course of business.

Receivables expected to be collected within 12 months of the end of the reporting period are classified as current assets. All other receivables are classified as non-current assets.

Collectability of trade and other receivables are reviewed on an ongoing basis. Debts that are known to be uncollectible are written off then identified. An allowance for doubtful debts is raised when there is objective evidence that they will not be collectible.

**(i) Inventories General**

Inventories are measured at the lower of cost and net realisable value.

Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale.

*Land Held for Resale*

Land held for development and sale is valued at the lower of cost and net realisable value. Cost includes the cost of acquisition, development, borrowing costs and holding cost until completion of development. Finance costs and holding charges incurred after development is completed are expensed.

Gains and losses are recognised in profit and loss at the time of signing an unconditional contract of sale in significant risks and rewards, and effective control over the land, are passed on to the buyer at this point.

Land held for sale is classified as current except where it is held as non-current based on Council's intentions to release for sale.

**(J) Fixed Assets**

Each class of fixed assets with in either property, plant and equipment or infrastructure, is carried at cost or fair value as indicated less, where applicable, any accumulated depreciation and impairment losses.

*Mandatory Requirement to Revalue Non-Current Assets*

Effective from 1 July 2012, the Local Government (Financial Management) Regulations were amended and the measurement of non-current assets at Fair Value became mandatory.

The amendments allow for a phasing in of fair value in relation to fixed assets over three year as follows:

- (a) For the financial year ending on 30<sup>th</sup> June 2013, the fair value of all of the assets of the local government that are plant and equipment: and
- (b) For the financial year ending on 30<sup>th</sup> June, 2014, the fair value of all of the assets of the local government:
  - I. That are plant and equipment: and
  - II. That are –
    - i. Land and building; or
    - ii. Infrastructure;

And

- (c) For a financial year ending on or after 30<sup>th</sup> June 2015, the fair value of all of the assets of the local government.

Thereafter, in accordance with the regulations, each asset class must be revalued at least every 3 years.

In 2013, Council commenced the process of adopting Fair Value in accordance with the Regulations.

Relevant disclosures, in accordance with the requirements of Australian Accounting Standards, have been made in the budget as necessary.

#### *Land Under Control*

In accordance with Local Government (Financial Management) Regulation 16(a), the Council was required to include as an asset (by 30<sup>th</sup> June 2013). Crown Land operated by the local government as a golf course, showground, racecourse or other sporting or recreational facility of state or regional significance.

Upon initial recognition, these assets were recorded at cost in accordance with AASB 116. They were then classified as Land and revalued along with other land in accordance with the other policies detailed in the Note.

#### *Initial Recognition and Measurement between Mandatory Revaluation Dates*

All assets are initially recognised at cost and subsequently revalued in accordance with the mandatory measurement framework detailed above.

In relation to this initial measurement, cost is determined as the fair value of the assets given as consideration plus costs incidental to the acquisition. The assets acquired at no cost or for nominal consideration, cost of determined as fair value at the date of acquisition. The cost of non-current assets constructed by the Council includes the cost of all materials used in construction, direct labour on the project and an appropriate proportion of variable and fixed overheads.

Individual assets acquired between initial recognition and the next revaluation of the asset class in accordance with the mandatory measurement framework detailed above, are carried at cost less accumulated depreciation as management believes this approximates fair value. They will be subject to subsequent revaluation of the next anniversary date in accordance with the mandatory measurement framework detailed above.

#### *Revaluation*

Surplus in equity. Decreases that offset previous increases of the same asset are recognised against revaluation surplus directly in equity. All other decreases are recognised in profit or loss.

#### *Transitional Arrangement*

During the time it takes to transition the carrying value of non-current assets from the cost approach to the fair value approach, the council may still be utilising both methods across differing asset classes.

Those assets carried at cost will be carried in accordance with the policy detailed in the Initial Recognition section as detailed above.

Those assets carried at fair value will be carried in accordance with the Revaluation Methodology section as detailed above.

### *Land Under Roads*

In Western Australia, all land under roads is Crown land, the responsibility for managing which, is vested in local government.

Effective as at 1 July 2008, Council elected not to recognise any value of land under roads acquired on or before 30 June 2008. The accords with the treatment available in Australian Accounting Standard AASB 1051 Land Under Roads and the fact Local Government (Financial Management) Regulation 16(a)(1) prohibits local governments from recognising such land as an asset.

In respect of land under roads acquired on or after 1 July 2008, as detailed above, Local Government (Financial Management) Regulation 16(a)(1) prohibits local government from recognising such land as an asset.

Whilst such treatment is inconsistent with the requirements of AASB 1051, Local Government (Financial Management) Regulation 4 (2) provides, in the event of such an inconsistency, the Local Government (Financial Management) Regulations prevail.

Consequently, any land under roads acquired on or after 1 July 2008 is not included as an asset of the council.

### *Depreciation*

The depreciable amount of all fixed assets including buildings but excluding freehold land, are depreciated on a straight-line basis over the individual asset's useful life from the time the asset is held ready for use. Leasehold improvements are depreciated over the shorter of either the expired period of the lease or the estimated useful life of the improvements.

Major depreciation periods used for each class of depreciable assets are:

Building	30 to 50 years
Furniture and Equipment	4 to 10 years
Plant and Equipment	5 to 15 years
Sealed roads and street Formation	not depreciated
Pavement	50 years
Seal	
Bituminous seals	20 years
Asphalt Surfaces	25 years
Gravel Road Formation	Not depreciated
Pavement	50 years
Gravel Sheet	12 years
Formed roads Formation	Not depreciated
Pavement	50 years
Footpath – slab	20 Years
Sewerage piping	100 years
Water supply piping and drainage systems	75 years

The assets residual values and useful lives are reviewed and adjusted in appropriate, at the end of each reporting period.

An asset carrying amount is written down immediately to its recoverable amount if the assets carrying amount is greater than its estimated recoverable amount.

Gains and losses on disposals are determined by comparing proceeds with the carrying amount. These gains and losses are included in profit or loss in the period which they arise.

#### *Capitalisation Threshold*

Expenditure on items of equipment under \$5000 is not capitalised. Rather, it is recorded on an asset inventory listing.

#### ***Depreciation following Revaluation***

When an asset class is revalued each asset is given a revaluation amount, an estimated remaining useful life and, in the case of plant, furniture and equipment, a minimum written down value\*. In order to accurately depreciate the revalued assets, straight line depreciation is recalculated based on remaining useful life. Given the remaining life of these assets will vary greatly, the depreciation rates may not be consistent with the standard depreciation rates set for each class.

New assets will be depreciated at the standard depreciation rate for that class until the revaluation of the class is next performed.

\*Plant, furniture and equipment is recorded with a minimum written down value as these assets are generally expected to be sold within their useful life. Assets such as building do not have a minimum written down value applied as they are not generally expected to be sold.

#### **(k) Fair Value of Assets and Liabilities**

When performing a revaluation, the Council uses a mix of both independent and management valuations using the following guides:

Fair Value is the price that Council would receive to sell the asset or would have to pay to transfer a liability, in an orderly (i.e. unforced) transaction between independent, knowledgeable and willing market participants at the measurement date.

As fair value is a market-based measure, the closest equivalent observable market pricing information is used to determine fair value. Adjustments to market values may be made having regard to the characteristics of the specific assets. The fair values of assets that are not traded in an active market are determined using one or more valuation techniques. These valuation Techniques maximise, to the extent possible, the use of observable market data.

To the extent possible, market information is extracted from either the principal market for the asset (i.e. the market with the greatest volume and level of activity for the asset or, in the absence of such a market, the most advantageous market available to the entity at the end of the reporting period (i.e. the market that maximises the receipts from the sale of the asset after taking into account transaction costs and transport costs)

For non-financial assets, the fair value measurement also takes into account a market participant's ability to use the asset in its highest and best use or to sell it to another market participant that would use the asset in its highest and best use.

### *Fair Value Hierarchy*

AASB 13 required the disclosure of fair information by level of the fair value hierarchy, which categorises fair value measurement into one of three possible levels based on the lowest level that an input that is significant to the measurement can be categorised into as follows:

#### *Level 1*

Measurements based on quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

#### *Level 2*

Measurements based on inputs other than quoted prices in Level 1 that are observable for the asset or liability, either directly or indirectly.

#### *Level 3*

Measurements based on unobservable inputs for the asset or liability.

The fair values of assets and liabilities that are not traded in an active market are determined using one or more valuation techniques. These valuation techniques maximise, to the extent possible, the use of observable market data. If all significant inputs required to measure fair value are observable, the asset or liability is included in Level 2. If one or more significant inputs are not based on observable market data, the asset is included in Level 3.

### *Valuation Techniques*

The Council selects a valuation technique that is appropriate in the circumstances and for which sufficient data is available to measure fair value. The availability of sufficient and relevant data primarily depends on the specific characteristics of the asset or liability being measured. The valuation techniques selected by the Council are consistent with one or more of the following valuation approaches:

#### *Market Approach*

Valuation techniques that use prices and other relevant information generated by market transactions for identical or similar assets or liabilities.

Valuation techniques that convert estimated future cash flows or income and expenses into a single discounted present value.

#### *Cost Approach*

Valuation techniques that reflect the current replacement cost of an asset as its current service capacity.

Each valuation technique inputs that reflect the assumptions that buyers and sellers would use when pricing an asset or liability, including assumptions about risks. When selecting a valuation technique, the council gives priority to those techniques that maximise the use of observable inputs and minimise the use of unobservable inputs. Inputs that are developed using market data (such as publicly available information on actual transactions) and reflect the assumptions that buyers and sellers would generally use when pricing the asset or liability and considered observable, whereas inputs for which market data is not available and therefore are developed using the best information available about such assumptions are considered unobservable.

As detailed above, the mandatory measurement framework imposed by the Local Government (Financial Management) Regulation required, as a minimum, all assets carried at a revalued amount to be revalued at least every 3 years.

### *Initial Recognition and Measurement*

Financial assets and financial liabilities are recognised when the Council becomes a party to the contractual provisions to the instrument. For financial assets, this is equivalent to the date that the Council commits itself to either the purchase or sale of the asset (i.e. trade date accounting is adopted).

Financial instruments are initially measured at fair value plus transaction costs, except where the instrument is classified 'at fair value through profit or loss', in which case transaction costs are expensed to profit or loss immediately.

### *Classification and Subsequent Measurement*

Financial instruments are subsequently measured at fair value, amortised cost using the effective interest rate method or cost.

Amortised cost is calculated as:

- (a) The amount in which the financial asset or financial liability is measured at initial recognition;
- (b) Less principal repayments and any reduction for impairment and
- (c) Plus or minus the cumulative amortisation of the difference, if any, between the amount, initially recognised and the maturity amount calculated using the effective interest rate method.

## **(I) Financial Instruments**

The effective interest method is used to allocate interest income or interest expense over the relevant period and is equivalent to the rate that discounts estimated future cash payments or receipts (including fees, transaction costs and other premiums or discounts) through the expected life (or when this cannot be reliably predicted, the contractual term) of the financial instrument to the net carrying amount of the financial asset or financial liability. Revisions to expected future net cash flows will necessitate an adjustment to the carrying value with a consequential recognition of an income or expense in profit or loss.

### *(i) Financial assets at fair value through profit and loss*

Financial assets are classified at "fair value through profit and loss" when they are held for trading for purpose of short term profit taking. Assets in this category are classified as current assets. Such assets are subsequently measured at fair value with changes in carrying amount being included in profit or loss.

### *(ii) Loans and receivables*

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and are subsequently measured at amortised cost. Gains or losses are recognised in profit or loss.

Loans and receivables are included in current assets where they are expected to mature within 12 months after the end of the reporting period.

### *(iii) Held-to-maturity investments*

Held-to-maturity investments are non-derivative financial assets with fixed maturities and fixed or determinable payments that the Council's management has the positive intention and ability to hold to maturity. They are subsequently measured at amortised cost. Gains or losses are recognised in profit or loss.

Held-to-maturity investments are included in current assets where they are expected to mature within 12 months after the end of the reporting period. All other investments are classified as non-current.

(iv) *Available-for-sale financial assets*

Available-for-sale financial assets are non-derivative financial assets that are either not suitable to be classified into other categories in financial assets due to their nature, or they are designated as such by management. They comprise investments in the equity of other entities where there is neither a fixed maturity nor fixed or determinable payment.

They are subsequently measured at fair value with changes in such fair value (i.e. gains or losses) recognised in other comprehensive income (except for impairment losses). When the financial asset is derecognised, the cumulative gain or loss pertaining to that asset previously recognised in other comprehensive income is reclassified into profit or loss

Available-for-sale financial assets are included in current assets, where they are expected to be sold within 12 months after the end of the reporting period. All other available for sale financial assets are classified as non-current.

(v) *Financial Liabilities*

Non-derivative financial liabilities (excl. financial guarantees) are subsequently measured at amortised cost. Gains or losses are recognised in the profit or loss.

*Impairment*

A financial asset is deemed to be impaired if, and only if, there is objective evidence of impairment as a result of one or more events (a "loss event") having occurred, which has an impact on the estimated future cash flows of the financial asset(s).

In the case of available-for-sale financial assets, a significant or prolonged decline in the market value of the instrument is considered a loss event. Impairment losses are recognised in profit or loss immediately. Also, any cumulative decline in fair value previously recognised in other comprehensive income is reclassified to profit or loss at this point.

In the case of financial assets carried at amortised cost, loss events may include: indications that the debtors or a group of debtors are experiencing significant financial difficulty, default or delinquency in interest or principal payments; indications that they will enter bankruptcy or other financial reorganisation; and changes in arrears or economic conditions that correlate with defaults.

For financial assets carried at amortised cost (including loans and receivables), a separate allowance account is used to reduce the carrying amount of financial assets impaired by credit losses. After having taken all possible measures of recovery, if management establishes that the carrying amount cannot be recovered by any means, at that point the written-off amounts are charged to the allowance account or the carrying amount of impaired financial assets is reduced directly if no impairment amount was previously recognised in the allowance account.

*Derecognition*

Financial assets are derecognised where the contractual rights of receipt of cash flows expire or the asset is transferred to another party, whereby the Council no longer has any significant continual involvement in the risks and benefits associated with the asset.

Financial liabilities are derecognised where the related obligations are discharged, cancelled or expired. The difference between the carrying amount of the financial liability extinguished or transferred to another party and the fair value of the consideration paid, including the transfer of non-cash assets or liabilities assumed, is recognised in profit or loss.

**(m) Impairment of Assets**

In accordance with Australian Accounting Standards the Council's assets, other than inventories, are assessed at each reporting date to determine whether there is any indication they may be impaired.

Where such an indication exists, an impairment test is carried out on the asset by comparing the recoverable amount of the asset, being the higher of the asset's fair value less costs to sell and value in use, to the asset's carrying amount.

Any excess of the asset's carrying amount over its recoverable amount is recognised immediately in profit or loss, unless the asset is carried at a revalued amount in accordance with another standard (e.g. AASB 116) whereby any impairment loss of a revaluation decrease in accordance with that other standard.

For non-cash generating assets such as roads, drains, public buildings and the like, value in use is represented by the depreciated replacement cost of the asset.

At the time of adopting this budget, it is not possible to estimate the amount of impairment losses(if any) as at the 30<sup>th</sup> June, 2015.

In any event, an impairment loss is a non-cash transaction and consequently, has no impact on the budget document.

**(n) Trade and Other Payables**

Trade and other payables represent liabilities for goods and services provided to the Council prior to the end of the financial year that are unpaid and arise when the Council becomes obliged to make future payments in respect of the purchase of these goods and services. The amounts are unsecured, are recognised as a current liability and are normally paid within 30 days of recognition.

**(o) Employee Benefits**

*Short-Term Employee Benefits*

Provision is made for the Council's obligations for short term employee benefits. Short term employee benefits are benefits (other than termination benefits) that are expected to be settled wholly before 12 months after the end of the annual reporting period in which the employees render the related service, including wages, salaries and sick leave. Short-term employee benefits are measured at the (undiscounted) amounts expected to be paid when the obligation is settled.

The Council's obligations for short-term employee benefits such as wages, salaries and sick leave are recognised as part of current trade and other payables in the statement of financial position. The Council's obligations for employees' annual leave and long service leave entitlements are recognised as provisions in the statement of financial position.

*Other long-Term Employee Benefits*

Provision is made for employees' long service leave and annual leave entitlements not expected to be settled wholly within 12 months after the end of the annual report period in which the employees render the related service. Other long-term employee benefits

are measured at the present value of the expected future payments to be made to employees. Expected future payments incorporate anticipated future wages and salary levels, durations or service and employee departures and are discounted at rates determined by reference to market yields at the end of the reporting period on government bonds that have maturity dates that approximate the terms of the obligations. Any measurements for changes in assumptions of obligations for other long-term employee benefits are recognised in profit or loss in the periods in which the changes occur.

The Council's obligations for long-term employee benefits are presented as non-current provisions in its statement of financial position, except where the Council does not have an unconditional right to defer settlement for at least 12 months after the end of the reporting period, in which case the obligations are presented as current provisions.

**(p) Borrowing Costs**

Borrowing costs are recognised as an expense when incurred except where they are directly attributable to the acquisition, construction or production of a qualifying asset. Where this is the case, they are capitalised as part of the cost of the particular asset until such time as the asset is substantially ready for its intended use or sale.

**(q) Provisions**

Provisions are recognised when the Council has a legal or constructive obligation, as a result of past events, for which it is probable that an overflow of economic benefits will result and the outflow can be reliably measured.

Provisions are measured using the best estimate of the amounts required to settle the obligation at the end of the reporting period.

**(r) Current and Non- Current Classification**

In the determination of whether an asset or liability is current or non-current, consideration is given to the same when each asset or liability is expected to be settled. The asset or liability is classified as current if it is expected to be settled within the next 12 months, being the Council's operational cycle. In the case of liabilities where the Council does not have the unconditional right to defer settlement beyond 12 months, such as vested long service leave, the liability is classified as current even if not expected to be settled within the next 12 months. Inventories held for trading are classified as current even if not expected to be realised in the next 12 months except for land held for sale where it is held as non-current leased on the Council's intention to release for sale.

**(s) Comparative Figures**

Where required, comparative figures have been adjusted to conform with changes in presentation for the current budget year.

**(t) Budget Comparative Figures**

Unless otherwise stated, the budget comparative figures shown in this budget document relate to the original budget estimate for the relevant item of disclosure.
